

ReadiUse™ Preactivated PE-Cy5 Maleimide

Catalog number: 2717 Unit size: 1 mg

Component	Storage	Amount
ReadiUse™ Preactivated PE-Cy5 Maleimide	Refrigerated (2-8 °C), Minimize light exposure	1 mg

OVERVIEW

PE-Cy5 is a popular tandem color used in flow cytometry. Its primary absorption peak is at 565 nm with emission peak at ~660 nm. AAT Bioquest offers this preactivated PE-Cy5 maleimide to facilitate the PE-Cy5 tandem conjugations to antibodies and other proteins such as streptavidin and other secondary reagents. It is prepared from the commonly used crosslinker SMCC. Our preactivated PE-Cy5 maleimide is ready to conjugate the reduced antibodies and other thiol-containing biomolecules.

SAMPLE EXPERIMENTAL PROTOCOL

Reduction of IgG

- Prepare a fresh solution of 1.0 M DTT (15.4 mg/100 μL) in distilled water. Antibody solutions should be at 2 mg/mL or higher for best results. The reduction can be carried out in different buffers for example: MES, phosphate, and TRIS buffers (pH range 6 to 8). The antibody should be concentrated if less than 2 mg/mL.
- 2. Add 2 μ L of 1.0 M DTT stock per 100 μ L of antibody solution and mix well. Let the antibody solution stand at room temp for 30 minutes without additional mixing (to minimize reoxidation of cysteines to cystines).
- Purify the reduced antibody over a desalting column pre-equilibrated with 50 mM MES Buffer (pH=6.0-6.5) with 2 mM EDTA. (Desalting column:
 - https://www.aatbio.com/products/readiuse-bio-gel-p-6-spin-column?unit=60500)
- Measure the Antibody concentration with Nanodrop. (Con. (mg/ml)= A280nm/1.4) Note: The reduced antibody is not stable; the conjugation reaction needs to be carried out the conjugation as soon as possible after purification.

Conjugate with ReadiUse™ Preactivated PE-Cy5 Maleimide

- Reconstitute ReadiUse™ Preactivated PE-Cy5 Maleimide in 100 µL ddH ₂ O to 10 mg/mL. Note: Reconstituted ReadiUse™ Preactivated PE-Cy5 Maleimide are stable at 4 °C for one week, please kept it from light.
- Add reduced antibody to pre-activated PE-Cy5 directly to at the ratio of 250-300 μg PE-Cy5 /100 μg reduced antibody.
- 3. Rotate the mixture for 60-120 mins at room temperature.
- 4. After 60 minutes, block the free sulfhydryls on the antibody.
- 5. Prepare a fresh solution of 10 mg/mL NEM in DMSO; add $3.4~\mu L$ per mg of antibody and rotate for 20 minutes at room temperature.

Purification

 Antibody/PE-Cy5 conjugate could be further purified through size exclusion chromatography to get best performance. Note: The Antibody/PE-Cy5 conjugate solution is recommended to be stored at 2~8 °C and kept from light.

DISCLAIMER

AAT Bioquest provides high-quality reagents and materials for research use only. For proper handling of potentially hazardous chemicals, please consult the Safety Data Sheet (SDS) provided for the product. Chemical analysis and/or reverse engineering of any kit or its components is strictly prohibited without written permission from AAT Bioquest. Please call 408-733-1055 or email info@aatbio.com if you have any questions.
