

## Chemical Sewage Degrading Bacteria Agent

### SPECIFICATION

<b>Cat.No.</b>	EPB-026
<b>Product Name</b>	Chemical Sewage Degrading Bacteria Agent
<b>Product Ingredients</b>	Pseudomonas, Bacillus, Corynebacterium, Achromobacter, Aspergillus, Fusarium, Alcaligenes, Agrobacterium, Arthrobacter, Flavobacterium, Nocardia, etc.
<b>Product Format</b>	Powder
<b>Shelf Life</b>	24 Months
<b>Bacterial Content</b>	10×10 <sup>9</sup> CFU/g
<b>Application</b>	Suitable for urban sewage treatment plant, purification of water quality in aquaculture areas, lake surface water and artificial lake landscape pool, restoration and treatment of contaminated soil.
<b>Efficacy and Effect</b>	<ol style="list-style-type: none"><li>1. This product is a special compound bacterial strain for chemical wastewater purification. It can quickly decompose medium and large molecular alkanes in chemical wastewater, including organic substances such as benzene rings, and convert them into non-toxic and harmless carbon dioxide and water. It can also improve the removal rate of organic pollutants in sewage treatment plants.</li><li>2. Due to the synergistic effect of the characteristics of the strain and the flora, the refractory substances are degraded, the pollutant load of the sewage treatment system is increased, and the impact resistance is enhanced.</li></ol>
<b>Usage Method</b>	200-500 g/m <sup>3</sup>
