

## Product Information

### Endotoxin Removal Beads

**CAT#:** EKIT-013

#### Product Information

<b>Description/Features</b>	Due to the high toxicity of bacterial endotoxins and DNA in vivo and in vitro, the removal of these molecules from protein preparations is of great importance for many applications. However, common protein purification procedures are often not effective with regard to removal of bacterial endotoxins and DNA. Therefore, recombinant protein preparations are often contaminated with endotoxins and DNA originating from host cells.
<b>Capacity</b>	For up to $4.2 \times 10^6$ Endotoxin Units (EU) or for up to 7000 ng DNA per mL of Endotoxin Removal Beads.
<b>Formulation</b>	One vial contains 3 mL Endotoxin Removal Beads at a concentration of 60 mg/mL in deionized water containing 0.05% sodium azide.
<b>Storage</b>	Store protected from light at 2–8 °C. Do not freeze. The expiration date is indicated on the vial label.
