

Complex Biological Bacteria 2

SPECIFICATION

Cat.No.	EPB-014
Product Name	Complex Biological Bacteria 2
Product Ingredients	Pseudomonas, ammonifying bacteria, nitrifying and denitrifying bacteria, coryneform bacteria, Alcaligenes, Nocardia, compound enzyme preparations, etc.
Product Format	Powder
Shelf Life	24 Months
Bacterial Content	10×10^9 CFU/g
Application	Constructed wetlands, purification of water quality in aquaculture areas, lake surface water and artificial lake landscape pool, restoration and treatment of contaminated soil, etc.
Product Details	This product can improve the activity of microorganisms in artificial wetland, promote the growth and reproduction of indigenous microorganisms, and create a healthy environment in which three types of microorganisms, anaerobic, facultative and aerobic, can coexist in the wetland environment, forming an effective environment. The use of valuable microbial groups can quickly decompose the organic matter in the wetland, improve the reoxygenation function of the water body, so as to achieve the rapid degradation of organic matter in the sediment and the reduction of total nitrogen and improve water quality and water ecological restoration. This product is used in artificial wetlands to completely decompose animal bait, feces, animal carcasses, dead algae at the bottom of the pool, and eliminate the blackening and odor of the bottom.
Usage Method	Wetland treatment: mix with carriers (such as ceramsite, volcanic rock, etc.), evenly spread in the wetland, or directly sprinkle in the wetland, $500-1500 \text{ g/m}^3$.
