## Description

Recognizes a protein of 95kDa, which is identified as villin. It is a major constituent in the microvilli, which compose the brush border of epithelial cells forming absorptive surfaces of the intestinal and renal proximal tubular epithelia. Anti-Villin labels the brush border area in the gastrointestinal mucosal epithelium and urogenital tract. Among neoplasms, villin is predominantly expressed in tumors of colorectal origin. Antibody to villin is useful in identifying malignant cells from primary and metastatic colorectal carcinomas. This antibody also labels Merkel cells of the skin.

## Application Notes

Optimal dilution of the VIL1 antibody should be determined by the researcher.

## Immunogen

A recombinant partial protein sequence (within amino acids 600-700) from the human protein was used as the immunogen for the VIL1 antibody.

## Storage

Aliquot the VIL1 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
