Description

The protein encoded by this gene is involved in the synthesis of the unbranched glycosaminoglycan hyaluronan, or hyaluronic acid, which is a major constituent of the extracellular matrix. This gene is a member of the NODC/HAS gene family. Compared to the proteins encoded by other members of this gene family, this protein appears to be more of a regulator of

hyaluronan synthesis. Alternative splicing results in multiple transcript variants.

Application Notes

Titration of the HAS3 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 137-164 from the human protein was used as the immunogen for this HAS3 antibody.

Storage

Aliquot the HAS3 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
