Description

Exportin-5 (XPO5) is a protein that in humans is encoded by the XPO5 gene. The International Radiation Hybrid Mapping Consortium mapped the XPO5 gene to chromosome 6. This gene encodes a member of the karyopherin family that is required for the transport of small RNAs and double-stranded RNA-binding proteins from the nucleus to the cytoplasm. The encoded protein translocates cargo through the nuclear pore complex in a RanGTP-dependent process.

Application Notes

Optimal dilution of the Exportin-5 antibody should be determined by the researcher.

Immunogen

Amino acids 2-43 (AMDQVNALCEQLVKAVTVMMDPNSTQRYRLEALKFCEEFK) were used as the immunogen for the Exportin-5 antibody.

Storage

After reconstitution, the Exportin-5 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
