Description

The protein encoded by the TOR1A gene is a member of the AAA family of adenosine triphosphatases (ATPases), is related to the Clp protease/heat shock family and is expressed prominently in the substantia nigra pars compacta. Mutations in this gene result in the autosomal dominant disorder, torsion dystonia 1. [RefSeq]

Application Notes

Optimal dilution of the Torsin A antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human Torsin A / TOR1A was used as the immunogen for the Torsin A antibody.

Storage

Store the Torsin A antibody at -20oC.
