Description

The protein encoded by this gene belongs to the cyclic nucleotide phosphodiesterase family. It plays a role in signal transduction by regulating the intracellular concentration of cyclic nucleotides. This protein can hydrolyze both cAMP and cGMP to the corresponding nucleoside 5' monophosphate, but has higher affinity for cAMP, and is more efficient with cAMP as substrate. Alternatively spliced transcript variants have been described for this gene.

Application Notes

Optimal dilution of the PDE10A antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids H515-D779) was used as the immunogen for the PDE10A antibody.

Storage

After reconstitution, the PDE10A antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
