Description

Human chorionic gonadotropin antibody (hCG) is a glycoprotein hormone synthesized in syncytiotrophoblastic cells of placenta and in certain trophoblastic tumors. The hormone-specific alpha chains have molecular weights of 13 kDa. HCG is found in moles and choriocarcinoma, chorionic components of germ cell tumors, and syncytiotrophoblast like cells in seminoma/dysgerminoma and embryonal carcinoma. In diagnostic pathology, hCG is a useful marker for classification of germ cell tumors, identification of extragonadal germ cell tumors.

Application Notes

Optimal dilution of the HCG-beta antibody should be determined by the researcher.

Immunogen

Recombinant full-length human protein was used as the immunogen for the HCG-beta antibody.

Storage

Aliquot the HCG-beta antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
