Description

The protein encoded by this gene is a member of the mitogen-activated protein kinase (MAPK) family. These family members function in a protein kinase signal transduction cascade, where an activated MAPK kinase kinase (MAP3K) phosphorylates and activates a specific MAPK kinase (MAP2K), which then activates a specific MAPK. This MAP3K protein plays an essential role in apoptotic cell death triggered by cellular stresses. [provided by RefSeq].

Application Notes

The stated application concentrations are suggested starting points. Titration of the MAP3K15 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 315-342 from the human protein was used as the immunogen for the MAP3K15 antibody.

Storage

Aliquot the MAP3K15 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
