Alternative Names

UBE4A; KIAA0126; Ubiquitin conjugation factor E4 A **Background** This gene encodes a member of the U-box ubiquitin

ligase family. The encoded protein is involved in multiubiquitin chain assembly and plays a critical role in chromosome condensation and separation

through the polyubiquitination of securin.

Autoantibodies against the encoded protein may be markers for scleroderma and Crohn's disease. A pseudogene of this gene is located on the long arm
