Ikaros family zinc finger protein 2

**Background** This gene encodes a member of the Ikaros family of

zinc-finger proteins. Three members of this protein

family (Ikaros, Aiolos and Helios) are

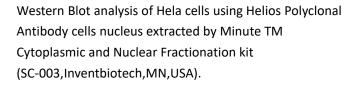

hematopoietic-specific transcription factors involved in the regulation of lymphocyte development. This protein forms homo- or hetero-dimers with other

Ikaros family members, and is thought to function predominantly in early hematopoietic development. Multiple transcript variants encoding different isoforms have been found for this gene, but the biological validity of some variants has not been determined. [provided by RefSeq, Jul 2008],
