

SEM6D rabbit pAb

Cat No.:ES10958

For research use only

Overview

Product Name	SEM6D rabbit pAb
Host species	Rabbit
Applications	WB;ELISA
Species Cross-Reactivity	Human;Mouse
Recommended dilutions	WB 1:500-2000 ELISA 1:5000-20000
Immunogen	Synthesized peptide derived from part region of
	human protein
Specificity	SEM6D Polyclonal Antibody detects endogenous
	levels of protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and
	0.02% sodium azide.
Storage	Store at -20 $^\circ\!\mathrm{C}$. Avoid repeated freeze-thaw cycles.
Protein Name	Semaphorin-6D
Gene Name	SEMA6D KIAA1479
Cellular localization	[Isoform 1]: Cell membrane; Single-pass type I
	membrane protein.; [Isoform 2]: Cell membrane;
	Single-pass type I membrane protein.; [Isoform 3]:
	Cell membrane; Single-pass type I membrane
	protein.; [Isoform 4]: Cell membrane; Single-pass
	type I membrane protein.; [Isoform 5]: Cell
	membrane; Single-pass type I membrane protein.;
	[Isoform 7]: Cytoplasm.
Purification	The antibody was affinity-purified from rabbit
	antiserum by affinity-chromatography using
	epitope-specific immunogen.
Clonality	Polyclonal
Concentration	1 mg/ml
Observed band	118kD
Human Gene ID	80031
Human Swiss-Prot Number	Q8NFY4
Alternative Names	
Background	Semaphorins are a large family, including both
	secreted and membrane associated proteins, many

of which have been implicated as inhibitors or chemorepellents in axon pathfinding, fasciculation and branching, and target selection. All semaphorins possess a semaphorin (Sema) domain and a PSI domain (found in plexins, semaphorins and integrins) in the N-terminal extracellular portion. Additional sequence motifs C-terminal to the semaphorin domain allow classification into distinct subfamilies. Results demonstrate that transmembrane semaphorins, like the secreted ones, can act as repulsive axon guidance cues. This gene encodes a class 6 vertebrate transmembrane semaphorin that demonstrates alternative splicing. Several transcript variants have been identified and expression of the distinct encoded isoforms is thought to be regulated in a tissue- and development-dependent manner. [provided by RefSeq, Nov 2010],
