**Cellular localization** Cell membrane; Single-pass type I membrane

protein . Endoplasmic reticulum membrane ; Single-pass type I membrane protein. Golgi

apparatus membrane; Single-pass type I membrane protein. Nucleus membrane; Single-pass type I membrane protein. Endosome . Endosome membrane. Nucleus . In response to EGF,

translocated from the cell membrane to the nucleus

via Golgi and ER (PubMed:20674546,

PubMed:17909029). Endocytosed upon activation by ligand (PubMed:2790960, PubMed:17182860, PubMed:27153536, PubMed:17909029). Colocalized

with GPER1 in the nucleus of estrogen

agonist-induced cancer-associated fibroblasts (CAF)

**Background** The protein encoded by this gene is a

transmembrane glycoprotein that is a member of the protein kinase superfamily. This protein is a receptor for members of the epidermal growth factor family. EGFR is a cell surface protein that binds to epidermal growth factor. Binding of the protein to a ligand induces receptor dimerization and tyrosine autophosphorylation and leads to cell proliferation. Mutations in this gene are associated with lung cancer.
