

Absolute Mag™ PEG-NH2 Magnetic Polystyrene Particles, 8 µm

Cat.No: WHM-G135

DESCRIPTION

Description	Absolute Mag™ PEG-NH2 Magnetic Polystyrene Particles, 8 µm (# WHM-G135) are monodisperse magnetic particles, consisting of magnetite around an organic matrix of a polystyrene polymer, and finally coated with a polymer layer for the encapsulation of magnetite. These particles are designed with PEG-NH2 groups on the surface for the covalent binding of proteins, antibodies or other molecules by glutaraldehyde activation. These magnetic particles can easily be separated with a conventional permanent magnet. Standard deviation: < 5 % (C.V.).
--------------------	--

PRODUCT INFORMATION

Particle Size	8 µm
Functional Group	Amine
Concentration	50 mg/mL
Number of Particles	1.7E+8 particles/mL
Matrix	Polystyrene
Density	1.1 g/ccm
Magnetization	3.1 Am ² /kg particles (H = 80 kA/m)
Saturation Magnetization	> 3.8 Am ² /kg particles (H> 800 kA/m)

STORAGE AND SHIPPING

Storage Buffer	Suspension in water.
-----------------------	----------------------

Stability	Stable in aqueous buffers, methanol, ethanol, DMSO. Not stable in halogenated hydrocarbons, toluene, strong acidic solutions, e.g. 10% HCl .
Storage	Storage at 2 - 8 °C for 6 months.
Shelf Life	When stored as specified the product is stable for six months.
