

DiagPoly™ Streptavidin Poly(Methyl Methacrylate) PMMA Particles, 2 µm

Cat.No: DNP-PA050

DESCRIPTION

Description	Non-porous poly(Methyl Methacrylate) PMMA particles are functionalized with streptavidin via a long-chain polymer bridge covalently linked to the surface of PMMA particles. These streptavidin microparticles are suitable for coupling of biotinylated biomolecules.
--------------------	--

APPLICATION

Application Notes	Flow cytometry or other screening applications
--------------------------	--

PRODUCT INFORMATION

Diameter	2 µm
Functional Group	Streptavidin
Concentration	1% w/v
Size Distribution	CV: 5-10%.

STORAGE AND SHIPPING

Storage	2-8°C. Do not freeze.
