

DiagPoly™ Goat Anti-Mouse IgG (Fc) Fluorescent Polystyrene Particles, Nile Red, 2.5-4.5 µm

Cat.No: DNM-SP23-032

DESCRIPTION

Description DiagPoly™ Goat Anti-Mouse IgG (Fc) Fluorescent Polystyrene Particles, Nile Red, 2.5-4.5 µm conjugated with IgG Fc fragment specific antibody which reacts with Fc portion of mouse IgG heavy chains but not with the Fab portion. These particles are used in FACS based cell-binding analysis method for detecting protein-protein interaction and phagocytosis studies where the number of internalized microspheres per cell was determined from flow cytometry fluorescence histograms.

PRODUCT INFORMATION

Diameter	2.5-4.5 µm
Ligand	Goat Anti-Mouse IgG (Fc) Antibody
Concentration	0.1% w/v
