

Absolute Mag™ Alkyne Magnetic Particles, 3 µm, High Density

Cat.No: DNB-PCC18

DESCRIPTION

Description	3 µm alkyne magnetic particles, supplied at 1% solids. There are alkyne groups with high density (100 µmol/g) on the surface of particles. The compounds or proteins with azide groups can be immobilized on the particles easily by click chemistry. The diameter is nominal mean diameter, and the Lot-specific value is reported on COA.

PRODUCT INFORMATION

Particle Size	3 µm
Functional Group	Alkyne
Concentration	1%
Surface Group Density	100 µmol/g

STORAGE AND SHIPPING

Storage	4°C. Do not freeze.
