

DiagPoly™ Protein A/G Poly(Methyl Methacrylate) PMMA Particles, 5 µm

Cat.No: DNP-PA075

DESCRIPTION

Description	Non-porous poly(Methyl Methacrylate) PMMA particles are functionalized with protein A/G via a long-chain polymer bridge covalently linked to the surface of PMMA particles. These protein A/G microparticles are suitable for binding of IgG.
--------------------	---

APPLICATION

Application Notes	Flow cytometry or other screening applications
--------------------------	--

PRODUCT INFORMATION

Diameter	5 µm
Functional Group	Protein A/G
Concentration	1% w/v
Size Distribution	CV: 5-10%.

STORAGE AND SHIPPING

Storage	2-8°C. Do not freeze.
