

DiagSupport™ H-Leu-Chlorotriyl Polystyrene Resin, 80-160 µm, 0.4-0.7 mmol/g

Cat.No: SPS-RA23-352

DESCRIPTION

Description

This resin is a highly acid sensitive resin for generation of protected peptide fragments. Cleavage can be achieved in general by using 1-95% TFA in CH₂Cl₂ containing 5% triisopropyl-silane. Protected peptides are released with 1% acetic acid or trifluoroethanol. Fmoc D-amino acids available on request.

PRODUCT INFORMATION

Particle Size	80-160 µm
Functional Group	H-Leu
Capacity	0.4-0.7 mmol/g
