

DiagSupport™ H-Phe-Chlorotrityl Polystyrene Resin, 45-80 µm, 0.4-0.7 mmol/g

Cat.No: SPS-RA23-331

DESCRIPTION

Description

This resin is a highly acid sensitive resin for generation of protected peptide fragments. Cleavage can be achieved in general by using 1-95% TFA in CH₂Cl₂ containing 5% triisopropyl-silane. Protected peptides are released with 1% acetic acid or trifluoroethanol. Fmoc D-amino acids available on request.

PRODUCT INFORMATION

Particle Size	45-80 µm
----------------------	----------

Functional Group	H-Phe
-------------------------	-------

Capacity	0.4-0.7 mmol/g
-----------------	----------------
