

# DiagAg™ IDA Agarose Particles, 7.5% Crosslinked, 40 µm

Cat.No: DAG-CB23-22

## DESCRIPTION

**Description** DiagAg™ IDA Agarose Particles, 7.5% Crosslinked, 40 µm are developed for IMAC-based protein purification and protein enrichment methods. The particles in this suspension have an average diameter of 40 µm and thus great mechanical stability. Since the affinity of an IDA-metal-ion-complex depends on the loaded metal ion, we offer IDA agarose resin uncoupled to any metal ion for the case that we do not offer your desired ion combination. Through our coupling protocol, you can in turn attach your desired metal ions to the agarose particles.

## APPLICATION

**Application Notes** For coupling of metal ions for corresponding purification and/ or enrichment purposes

## PRODUCT INFORMATION

<b>Diameter</b>	40 µm
<b>Functional Group</b>	IDA
<b>Concentration</b>	50% v/v
<b>Matrix</b>	7.5% agarose
<b>Binding Capacity</b>	Depends on the loaded ion
<b>pH Range</b>	2-14
