Absolute Mag™ PEG-NH2 Magnetic Polystyrene Particles, 12 µm

Cat.No: WHM-G137

DESCRIPTION

Description	Absolute Mag™ PEG-NH2 Magnetic Polystyrene Particles, 12 µm (# WHM-G137) are monodisperse magnetic particles, consisting of magnetite around an organic matrix of a polystyrene polymer, and finally coated with a polymer layer for the encapsulation of magnetite. These particles are designed with PEG-NH2 groups on the surface for the covalent binding of proteins, antibodies or other molecules by glutaraldehyde activation. These magnetic particles can easily be separated with a conventional permanent magnet.
