Human Targets for IVD Research & Development

Powerful Analyte Targeting

Identifying and measuring specific analytes in human samples allows researchers to understand the roles of various biomolecules in both healthy and diseased states. This can help researchers understand how those analytes might be used as diagnostic or therapeutic targets. Immunoassays such as western blot, immunocytochemistry, and ELISA are widely used for these types of studies, where high-quality reagents are essential for generating reliable results.

Trusted Quality

ICL is a U.S.-based supplier of antibodies, ELISA kits, and protein reference standards to many of the world’s leading research institutions, pharmaceutical companies, and in vitro diagnostics (IVD) manufacturers. Established over 40 years ago in Oregon, we develop and manufacture our products in-house using internal gold standard controls for validation, assuring our customers consistent batch-to-batch performance, reliable long-term supply, and expert technical support from a team who knows our portfolio inside and out.

Comprehensive Catalog

Our growing product offerings include antibodies to a broad range of human proteins. With a variety of host species proven to work in multiple applications, these same antibodies form the basis of our ready-to-use sandwich ELISA kits. We offer an extensive selection of proteins for use as controls or reference standards, and we help you streamline research efforts with our core assay reagents like sera, bioconjugates, and antibodies to common epitope tags.

The ICL Difference

- Robust catalog of antibodies, ELISA kits, and protein reference standards
- Consistent batch-to-batch performance
- Reliable long-term supply
- Expert technical support
- Antigen sequencing reproducibility safeguards
- Rigorous in-house testing and gold standard quality control
