

Facts About Cervical Cancer

- Cervical cancer is the **FOURTH** most common cancer among women globally.
- A large majority of cervical cancer (more than **95%**) is due to the human papillomavirus (HPV).
- Cervical cancer is the most commonly diagnosed cancer in **23** countries and is the leading cause of cancer death in 36 countries.
- Two human papillomavirus (HPV) types (**16 and 18**) are responsible for nearly 50% of high grade cervical pre-cancers.

WHO HPV Guideline

- ✓ HPV DNA testing is recommended as the primary screening method in screening and treatment approaches.
- ✓ Generally, women after the age of 30 should be screened every 5 to 10 years.
- ✓ WHO recommends that HPV self-sampling should be made available as an additional approach to sampling in cervical cancer screening services, for women aged 30-60 years.

Self-sampling:

- Simple operation
- Privacy protection
- User-friendliness

Nucleic Acid Extraction Kit

Nucleic Acid Extraction Kit (Magnetic Beads Method)

32/96 samples in 20 mins
Suitable for large number of samples

Nucleic Acid Extraction Kit (Boiling Method)

No instrument required
Suitable for small number of samples

Nucleic Acid Extraction Kit (Spin Column)

No instrument required
Suitable for a wide range of sample types

Advantages:

Cost Optimization

Flexible combination scheme to maximize testing efficiency and save cost.

Wide coverage

Totally detect 24 HPV genotypes.

Fast Detection

Using multiplex fluorescent real time PCR technology, the whole process takes only 90 minutes.

Patient Management

A variety of detection solutions for different groups of people.

WE PROVIDE COMPLETE SOLUTION FOR HPV DETECTION.

Sample Collection

Professional sampling kit and self-sampling kit both available.
