ReliaTech GmbH

Our story

Since its foundation in 1999, ReliaTech has developed into one of the leading European manufacturers of growth factors, cytokines, receptors, mono- and polyclonal antibodies for life science research and industry. Our biggest aim is to satisfy our customers with products of the highest quality. For this reason, close contact with our customers is very important to us. A short and reliable communication as well as fast reagent supply efficiently support our business.

Our proteins and services

Proteins for research and preclinical applications

From development and production to formulation and quality control, our proteins and antibodies are handled by experienced scientists. With over 25 years of experience, our processes are well optimised. A product release is always based on clear specifications, such as purity, cell-based activity and impurity profile. All products are available in customised filling sizes and quantities.

Contract manufacturing

With our in-house system for transient and stable expression in different expression systems, including process development for cultivation and purification, we offer our customers a customised solution for the production of their protein of interest. The customised protein production is based on a flexible, modular system that allows for an individual selection of different service options depending on your specific needs.

Bioassay service

We offer our extensive expertise in cell proliferation assays to check the biological activity of customer proteins or even the responsiveness of customers cell line to a specific growth factor. This assay is frequently used as a first step to check the biological activity of a protein up to a validated assay with international standards.

Our quality promise

As an ISO 9001:2015 certified company, achieving the highest quality standards is very important to us. We are constantly working on improving our quality standards and optimizing our service. We regularly derive our quality measures from the ICH guidelines and are guided by the specifications of our internal QP.
