Exosomes are vesicle-like vesicles secreted by cells, the contents of which include proteins, mRNA, DNA, and lipids. Exosomes allow the exchange of complex information between cells, as well as having the unique ability to migrate, target, and selectively internalize into specific cells, making them very promising delivery vehicles.

Lifeasible provides one-stop exosome analysis services from exosome isolation, identification to exosome engineering, and ensures efficient and cost-effective solutions for customers. Our exosome platform offers services that can be tailored to meet the needs of different projects.

Our Services

- Isolation and Purification Services
- Exosome Imaging Services
- Exosome Identification
- Exosome Characterization
- Exosome Polyomics
- Exosome Engineering
- Glycomics Analysis of Milk Exosomes
- Exosomes Development for Cosmetic Hair Growth
- Labeled Exosome Antibody Development
- Customized Services for Mannosylated Exosomes
- Exosomes Development for Immunomodulation

Our Products

- Engineered Exosomes
- Immunobeads for Exosome Isolation
- Exosome Isolation Kits
- Exosome Protein Assay Kits
- Exosome ELISA Kits
- Exosome Marker Antibodies
- Exosome Supporting Reagents

We offer exosome services that cover a wide range of plant species.

Bidens pilosa
Lycium chinense
Mexican mint
Paeonia lactiflora
Blackberrylily rhizome

Zingiber officinale
Zea mays L.
Salvia leucantha
Angelica sinensis
Curcuma longa

Platostoma palustre
Citrullus lanatus
Sophora flavescens
Perilla frutescens
...
