

Northern Blot Service

Northern Blot:

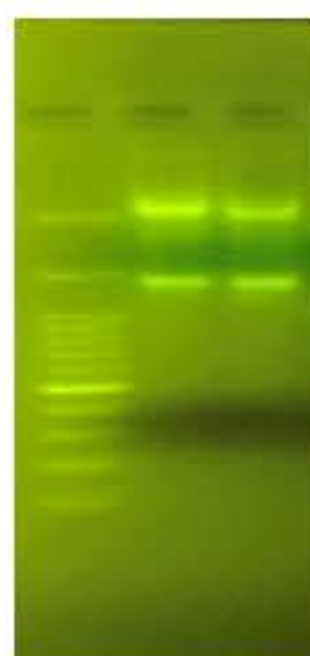

With increasingly strict regulatory requirement on radiation exposure, Tribioscience provides sensitive non-radioactive Northern blot technical development to continuously meet the demands of RNA characterization. Each stage has specifications to assure the quality of the procedures. In addition, Tribioscience provides products suitable for nucleic acid preparation and hybridization to help you customize your own project.

Main Features:

One-stop service: From RNA extraction to image development

Reliability: Highly consistent and repeatable

Sustainability: Non-radioactive probes detection

RNA structure
integrity analysis

Membrane transfer
efficiency analysis
